Run Your Fleet in the Cloud

Streamline the way your drivers do inspections, your mechanics manage faults and work orders, and you make decisions about your fleet with the Whip Around integration with Geotab.

Get automatic odometer and engine hour readings

Odometer and engine hour readings automatically sync with Whip Around to trigger mileage reports and maintenance schedules.

Navigate seamlessly between systems

View maintenance and compliance data on each vehicle in Geotab and navigate to Whip Around within Geotab to resolve any issues at the click of a button.

Trigger alerts for missed inspections on moving vehicles

Know as soon as a vehicle is moving and is missing a DVIR or has an active fault with email alerts and push notifications to your phone.

Group faults, defects and servicing into work orders

Provide your internal mechanics or external vendors with a single work order that lists, engine faults from Geotab, DVIR defects and servicing to track maintenance history and costs.

Manage diagnostic trouble codes (DTC) & engine faults

Get email notifications on new engine faults and generate work orders to be sent to mechanics for quick repairs.

Access the Whip Around DVIR app from Geotab Drive

Drivers can access the Whip Around app from within Geotab Drive to streamline their daily reporting process.
