

Streamline your Fleet Maintenance & Compliance

Our two-way Motive integration makes it easy to sync vehicles, capture DVIR defects, mileage & engine hours, location data, and engine faults within Whip Around without breaking your existing workflow.

Get automatic odometer and engine hour readings

Odometer and engine hour readings automatically sync with Whip Around to trigger mileage reports and maintenance schedules.

Trigger alerts for missed inspections on moving vehicles

Know as soon as a vehicle is moving and is missing a DVIR or has an active fault with email alerts and push notifications to your phone.

Manage diagnostic trouble codes (DTC) & engine faults

Get email notifications on new engine faults and generate work orders to be sent to mechanics for quick repairs.

Group faults, defects and servicing into work orders

Provide your internal mechanics or external vendors with a single work order that lists, engine faults from Motive, DVIR defects and servicing to track maintenance history and costs.

Manage Motive DVIR Defects

Drivers can conduct inspections on the Motive app and have defects sent through to Whip Around for mechanics to repair, certify and communicate back to the driver for DOT compliance.

Compliance with Confidence

Designed to meet the requirements of the FMCSA for DVIR, with the required signatures, displaying last inspections reports and closing the loop back to the driver around defects corrected.
