INTRODUCING

StayFit Predictive Maintenance

Optimum Fleet Health provides predictive maintenance significantly reducing fleet downtime. Though our AI learning and expert systems developed through expert analysis mechanical analysis of millions of vehicles over millions of hours of drive time.

- Vehicles transmit data to the cloud via TSP solutions
- Optimum Fleet Health takes all of the diagnostic data into a predictive analytics engine processing all engine, exhaust, coolant, brake, charging and fuel systems using machine learning artificial intelligence
- All information is displayed on our real-time technician friendly dashboard
- Non repetative critical only notifications can be customized and sent directly to technicians in real-time.
